

IN THE CLAIMS:

Please amend Claims 19, 26, 28 and 31 as shown below. The claims, as pending in the subject application, now read as follows:

1. to 18. (Canceled)

19. (Currently amended) A data processing apparatus, which communicates with an image processing apparatus that processes image data by using resources retained in memory, comprising:

retention means for retaining a resource[[s]] which ~~is~~ are utilized in image processing;

input means for inputting multiple display names for the resource retained by said retaining means; [[and]]

first selecting ~~setting~~ means for selecting a ~~setting~~ display name corresponding to a first printing language for the ~~names of a resource~~ from among the multiple display names input by said input means, or information indicating that a display name is not displayed corresponding to the first printing language; and

second selecting means for selecting a display name corresponding to a second printing language which is different from the first printing language for the resource from among the multiple display names input by said input means, or information indicating that a display name is not displayed corresponding to the second printing language for each of the resources retained by the retention means, wherein the display names or the information indicating that a

~~display name is not displayed is set for each of the resources and for each print language used in the image processing apparatus by said setting means.~~

20. to 22. (Canceled)

23. (Currently amended) The apparatus according to claim 19, wherein the resource is ~~resources include~~ a font resource used in printing, ~~and/or~~ a form resource for forming an image by being superimposed on print data at the time of printing, ~~and/or~~ a color-profile resource that expresses color space of an input/output device, ~~and/or~~ a look-up-table resource, which is a conversion table for color correction in color processing, or ~~and/or~~ a dither-pattern resource, which is pattern data for deciding expression of color in color processing.

24. and 25. (Canceled)

26. (Currently amended) A data processing apparatus, which communicates with an image processing apparatus that processes image data by using resources retained in memory, comprising:

a retention unit adapted to retain a resource ~~resources~~ which is ~~is~~ [[are]] utilized in image processing;

an input unit adapted to input multiple display names for the resource retained by said retention unit; [[and]]

a first selecting ~~setting~~-unit adapted to select a ~~select~~ [[set]] display name corresponding to a first printing language for the ~~names of a resource~~ from among the multiple display names

input by said input unit, or information indicating that no display name is displayed
corresponding to the first printing language; for each of the resources retained by the retention
unit,

a second selecting unit adapted to select a display name corresponding to a second
printing language which is different from the first printing language for the resource from among
the multiple display names input by said input unit, or information indicating that a display name
is not displayed corresponding to the second printing language ~~wherein the display names or the~~
~~information indicating that no display name is displayed is set for each of the resources and for~~
~~each print language used in the image processing apparatus by said setting unit.~~

27. (Canceled)

28. (Currently amended) A method for communication implemented by [[of]]a
data processing apparatus with an image processing apparatus that processes image data by using
resources retained in memory, said method comprising:

retaining a resource ~~resources~~ which is [[are]]utilized in image processing;

inputting multiple display names for the resource retained in the retaining step;

selecting a ~~setting~~ display name corresponding to a first printing language for the
resource from among the multiple display names input in the inputting step, ~~names~~ or
information indicating that a display name is not displayed corresponding to the first printing
language;

selecting a display name corresponding to a second printing language which is
different from the first printing language for the resource from among the multiple display names

input in the inputting step, or information indicating that a display name is not displayed
corresponding to the second printing language for each of the resources retained in the retaining
step, wherein the display names or the information indicating that a display name is not displayed
is set for each of the resources and for each print language used in the image processing
apparatus in said setting step; and displaying the resources using the set display names.

29. (Canceled)

30. (Currently amended) The method according to Claim 28, wherein the
resource is ~~resources are~~ selected from the group including a font resource used in printing, a
form resource for forming an image by being superimposed on print data at the time of printing, a
color-profile resource that expresses color space of an input/output device, a look-up-table
resource, which is a conversion table for color correction in color processing, and/or ~~[[or]]~~ a
dither-pattern resource, which is pattern data for deciding expression of color in color processing.

31. (Currently amended) A computer-readable storage medium storing a
computer program for communication of a data processing apparatus with an image processing
apparatus that processes image data by using resources retained in memory, said computer
program comprising:

code for retaining a resource ~~resources~~ which is ~~[[are]]~~ utilized in image
processing;

code for inputting multiple display names for the resource retained in the retaining
step; [[and]]

code for selecting setting display names corresponding to a first printing language for the resource from among the multiple display names input in the inputting step, or information indicating that a display name is not displayed corresponding to the first printing language;

selecting a display name corresponding to a second printing language which is different from the first printing language for the resource from among the multiple display names input in the step of inputting, or information indicating that a display name is not displayed corresponding to the second printing language for each of the resources retained in the retaining step, wherein the display names or the information indicating that a display name is not displayed is set for each of the resources and for each print language used in the image processing apparatus in said setting step.

32. (Canceled)

33. (Currently amended) The computer-readable medium storing a computer program according to Claim 31, wherein the resource is ~~resources are~~ selected from the group including a font resource used in printing, a form resource for forming an image by being superimposed on print data at the time of printing, a color-profile resource that expresses color space of an input/output device, a look-up-table resource, which is a conversion table for color correction in color processing, and/or a dither-pattern resource, which is pattern data for deciding expression of color in color processing.
